

Get More From Your Interactive Flat Panel

School districts have made significant investments in interactive flat panels for classrooms that are largely now being used as fancy overhead projectors.

One way to get more from your IFP? Install the ClassIn app! The ClassIn X app is free to download, compatible with your existing installed classroom hardware, and gives teachers an easy way to drive in-class engagement.

Why Try the ClassIn App on your IFP?

- **A Digital Blackboard For Today's Learners:** ClassIn's digital blackboard can be used for presentations, notes, in-class activities, drawing, and more. Plus, it has a near-infinite scroll and can be saved as a classroom artifact after every lesson. ClassIn supports .edb and 70+ other file types.
- **Incorporate 1:1 Devices in Every Lesson:** ClassIn has 25+ built-in instructional and engagement tools. If your students have 1:1 devices, these activities can be deployed directly to their device and monitored during class.
- **Make Lesson Materials More Accessible for Visually Impaired Learners:** With ClassIn, every student sees the same screen content in real-time. For students who have trouble seeing the board, they can easily access the lesson materials on their personal devices for a clearer, closer look.
